

ModelRight 3.6 Enhancements

The next generation in "Data Modeling"

****Enhanced Diagram Display Capabilities**

In today's business world data modeling is a top priority for both the Enterprise and SMB markets. **ModelRight 3.6** offering the most value and benefits for your technology investments.

ModelRight raises the bar surpassing other products, easy enough to use for the novice users and a full featured data modeling applications for the experts.

****ModelRight 3.6 offers an unprecedented level of diagramming capability and flexibility.**

- ✓ Ability to display and on-diagram edit any type of object or property
- ✓ Ability to display additional types of relations – ie. uses and inherits from. For example, you can display a schema object(s), and any of its properties, and tell ModelRight to display relation lines to any table that uses it.

****Enhanced Model Explorer Categories**

Ability to extend more categories (ie. Table and View).

- ✓ Ability to create Model Explorer categories to display secondary level object types – like columns, indexes
- ✓ Ability to create Model Explorer categories that auto-update according to a set of criteria – like having a certain property or inheritance value – like all tables in a tablespace and/or schema

****Enhanced Model Subset**

One of the key feature for organizing large models. **ModelRight 3.6** will allow you to create easily create "Auto Model Subsets" that automatically adds objects (Tables, and others) to the Model Subset based on some criteria(s) – ie. show me all tables that are in a certain scheme or use a certain tablespace/filegroup.

- ✓ Ability to create Model Subsets that auto-update according to a set of criteria – ie. Having a certain property or inheritance value.
